

Story Narratives

User Story 1

Checkout Section and Making a Purchase

As a customer, I want the checkout section to include a discount system, different payment options, and free shipping over \$30 so that users can apply discounts to their purchase, receive free shipping, and select their preferred payment method.

Acceptance Criteria:

Scenario 1: Entering a discount code

Given the user is entering a discount code, when the code is valid then the current price will be updated and when the code is not valid, the current price will remain the same and the user will be prompted to enter a valid code.

Scenario 2: Selecting a payment method

Given the user is choosing a payment method, when the user selects the gift card option then they will be able to enter a gift card code or when the user selects the credit card option then they will be prompted to enter a card number, card name, expiration date, and security code.

Scenario 3: Free shipping

Given the user is checking out, when the user has spent thirty dollars or more before tax, then they will receive free shipping or when the user has not spent the proper amount then they will be shown a standard shipping rate of \$8.99.

User Story 2

Viewing a Product

As a customer, I want each product to have a photo and description, low-stock warning, and sizing options so that users can understand the product and easily know which one to purchase.

Acceptance Criteria:

Scenario 1: Viewing products on the home page

Given the user is viewing the products on the home page, when the user views the page then each product will have a name, price and photo displayed.

Scenario 2: Selecting a product

Given the user wants more information on a product, when the user selects the product then the website will show the product photo, name, price and description. The user will also see available sizes.

Scenario 3: Choosing a size

Given the user wants to purchase a product, when the user views the product then two different sizing options will be shown with their prices and the user can select the size they want.

Scenario 4. Viewing an item with low stock

Given the user is viewing an item, when the item has 50 units or less, then a "low in stock" warning will be displayed.

User Story 3

Navigation of website

As an end user, I want the website to include a search bar and filter system so that I can search for a specific product or filter all products by a certain category.

Scenario 1: Using the search bar

Given that a user selects the search bar, when the user enters a product name then the website will show the products related to what they are searching for.

Scenario 2: Using the filter system

Given that a user wants to filter for specific products, when the user selects a certain size, scent, or price range, then the website will display products that meet the chosen criteria.

User Story 4

Functionality of web page

As an end user, I want the website to display and function properly on multiple browser types and on both mobile and desktop devices so that I can easily shop in whatever way is most convenient for me.

Scenario 1: Interacting with the web site on multiple browsers

Given many users use different browsers, when the user loads or interacts with our website then it will function and display properly on every popular browser.

Scenario 2: Shopping on any device

Given that many users have multiple devices, when the user loads or interacts with our website then it will function and display properly on any mobile or desktop device.

User Story 5

Title: Ratings and Reviews

As an end user, I want the website to include user ratings and reviews for each product so that I can see what a product is like and determine if I should buy it.

Scenario 1: Viewing Reviews and Ratings

Given that a user is viewing a product, when the user selects “show reviews and ratings” then the website will display all past reviews of a product with an overall number rating.

Scenario 2: Uploading a review and rating

Given that the user wants to review a product they purchased, when the user selects “write review” then they will be shown a text box that they can fill with their thoughts and an option to give a rating from 1 to 5. Also, when the user selects “post review” then the review will be posted under the product for other users to see.
